Anglesey tidal stream demonstration zone development

## Menter Môn's Morlais Energy Development Proposals

### Have Your Say

Morlais is a Menter Môn tidal stream energy project which aims to benefit local communities, the economy and environment through renewable, low carbon electricity generation. The Morlais project manages a 35 km<sup>2</sup> area of sea bed known as the West Anglesey Demonstration Zone and has the potential to become one of the largest tidal stream energy sites in the world with a potential to generate 240MW of electricity.

The first stage of the project looks to secure consent for the development of the demonstration zone with community consultation and engagement a key part of this. Submission of the consent application is planned for July 2019. Subject to consent the second stage will put the necessary infrastructure in place for developers of tidal stream energy converters to commercially deploy their technology.

Please complete this questionnaire to let us know your views on the proposed tidal stream development.

We have prepared a Community Consultation Commitment, which includes a description of the project elements, information about the Environmental Impact Assessment (EIA) and details of how you can respond to the consultation.

Please refer to the Community Consultation Commitment for additional information to help provide us with your feedback on the proposal.

Electronic copies of all consultation documents, including this questionnaire, can be found online on the project website [www.morlaisenergy.com](http://www.morlaisenergy.com). You can also return this questionnaire via pre-addressed envelopes provided at public events or the postal address below and via email.
